**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U. S. C. 121:

I. Claims 1-15 and 19-21, drawn to a method of treating a patient suffering from critically ill polyneuropathy (CIPNP), systemic inflammatory response syndrome (SIRS), sepsis, or other cited diseases comprising administering a blood glucose regulator, classified in class 514, subclass 3, and class 530, subclass 303.

II. Claims 16-18, drawn to advertising material having information on the indications and utilities of a blood glucose regulator, and a method of selling a blood glucose regulator by giving information of about the indications and utilities of a blood glucose regulator, classified in class 283, subclass 56.

Should group I be elected, applicant is required to select one disease from claims 1, 2, 3, 4, 15 and 21, and one type of compounds as a blood glucose regulator (insulin or insulin analogs; compounds that stimulate signal transduction mediated by an insulin receptor type tyrosine kinase; protein-tyrosine phosphatases, type II antidiabetica; or biologically active substances having insulin releasing action) from claims 5 and 21. This is not species election. Each type of compounds are distinct from each other because they have different structures, different mode of operation and different function or effect. Each disease is distinct from each other because the diagnosis of each disease is different, each disease utilizes different drug for treatment and has different outcome.

2. The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1653

The method of Invention I is patentably distinct from the method of Invention II because they have different method steps, utilize different materials and produce different results.

The product of Invention II is distinct from the method of Invention I because the product of Invention II can be neither made by nor used in the method of invention I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and their recognized divergent subject matter, and because each invention requires different searches but are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

A telephone call was made to Richard Bork on April 10, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.
